# fuse creator™

an **RM** product

## Authoring digital content just became easy...

Fuse Creator enables teachers and students, without design or programming skills, to create engaging, interactive digital activities for whiteboard or individual use. High quality activities are produced quickly and simply and can be used on PC or Mac computers, locally, on a school network or over the web.

Fuse drag and drop activity, created by a teacher

## Create

Materials can be created by:

- teachers for use in their own classrooms
- education jurisdictions for their schools to use
- students, to develop their own knowledge and understanding
- teachers, to share with other teachers and schools.

## Publish

Export activities for use on standalone computers, on websites, or in your virtual learning environment.

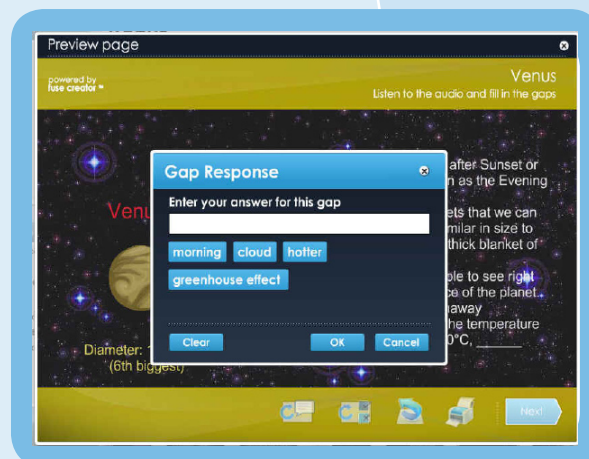

## Learn

Fuse materials can be used:

- on interactive whiteboards for whole class teaching
- by individual students to develop their own learning, at school or at home
- for revision by students
- by individual students for assessment or homework.

Fuse linking activity, created by a teacher

Creating high quality digital learning materials used to be too time consuming for many classroom teachers. Fuse Creator brings the creation of interactive content within the reach of all teachers and students.

## The content creation process

- 1** Create pages of content using your own images and text, based on interactive templates. Pages can include 'scored' activities, which are automatically marked.
- 2** Having created pages, define progression between them using the highly visual sequencing tool. Sequences can be linear, or can include branching, based on user selection or scores.
- 3** Add an optional final report page and feedback messages for users. Activity reports can usefully inform assessment for learning.
- 4** Try out and edit the activity.
- 5** Export activities as flash content for use on standalone computers, on websites or in your virtual learning environment.

Page styles that can be generated by Fuse Creator:

- Drag and drop
- Ordering
- Linking lines
- Cloze (fill the gaps)
- Multiple choice
- Report page
- User choice (menu page)
- Sorting
- Information page

Fuse pages can include users' own photos, images, video and sound files. These can be designed for use within any curriculum area and by any age group.

Fuse content can be built as linear or non-linear sequences, allowing for personalisation and differentiation.
